SIEMENS SAFETY SWITCHES - OUTDOOR TYPE 3R

- Tough and durable metal cabinet construction that adds rigidity and strength. The enclosure's metal edges and corners have been rolled to minimize cuts, nicks and scrapes to the installer's hands and insulated conductors.
- Rugged metal handle with large red grip which provides highly visible On/Off indication.
- Generous wire gutters that meet and/or exceed UL and NEC wire bending space requirements.
- Highly visible blades and enhanced double-break technology.
- Spring reinforced fuse clips that assure reliable contact for cool operation.
- Front removable mechanical lugs that are field convertible to copper mechanical lugs or compression (crimp) connectors.
- A hinged clear line terminal shield with probe holes for inspecting or testing line side terminals.
- The enclosure offers tangential knockouts for easy conduit line up and two or three point mounting, and a door that opens greater than 180°.
- With easy to install replacement part kits, every part is replaceable - including load and line bases, the handle and even the operating mechanism.
- The rugged metal handle can be padlocked in the off position with up to 3 padlocks with 5/16" hasps.

3/4" X 250' FLEXIBLE DROP HOSE

3/4" x 250' FLEXIBLE DROP HOSE
We are pleased to offer four high quality hoses for your drop hose requirements, Premium, Premium Plus, Senninger & Goodyear Sureline. For more than a decade, we have distributed over 12,000 miles of our Premium and Premium Plus grade drop hose. Installed extensively on over an estimated 25,000 plus center pivot systems, it is the most popular and widely used product of its type in today's marketplace. However, in our quest to improve upon this highly successful product, we asked the question, "can we make the best hose in the market, constructed specifically for drop application, even better at a realistic, affordable price?" We concluded the answer to be "yes," so today you have a choice of four great products.

Premium: A co-extruded liner which has a solid thin inner wall & a thicker foam wall, providing for lighter weight & a more flexible product. Highly durable PVC cover which provides excellent weatherability & maximum resistance to ultra-violet degradation. A knitted synthetic cord reinforcement between the PVC jacket & the inner core. Medium burst strength.
Quality: GOOD

Premium Plus : A solid co-extruded liner which results in a product which is heavier & more kink resistant. Highly durable PVC cover which provides excellent weatherability & maximum resistance to ultra-violet degradation. A knitted synthetic cord reinforcement between the PVC jacket & the inner core. Medium-high burst strength.
Quality: BETTER

Senninger®: A solid PVC inner core tube which results in a more kink resistant hose. Highly durable PVC cover which provides excellent weatherability & maximum resistance to ultra-violet degradation. Polyester knitted reinforcement yarns between the PVC jacket and the inner core. Medium-high burst strength.
Quality: BETTER

Goodyear® Sureline®: A heavy duty solid extruded Versigard® synthetic rubber core wrapped with a spiral reinforced synthetic yarn. Covered with a black Versigard® extruded seamless jacket. Extremely kink resistant & high burst strength.
Quality: BEST

SENNINGER SUPER SPRAY®

The Super Spray is Senninger's most versatile spray nozzle. A wide selection of interchangeable snap-in deflector pads are available to address irrigation and chemigation requirements over a variety of crop, climatic and soil conditions. Pads available in 1) Smooth, 2) 36 medium groove, 3) 24, 36 & 48 deep groove. All types of pads available in either concave, flat or convex. Forty-five sizes of color coded nozzles are available to use at a suggested pressure range of 6-30 PSI.

Part No.	Description	Price

SENNINGER LDN® LOW DRIFT NOZZLE

Based upon nozzle size and flow, the LDN is designed to shear off water from the nozzle stream and direct it onto multiple levels of deflector pads, thereby controlling stream placement off the pad and droplet size. Also can be used as a single pad spray for maximum throw & droplet size off the pad. Circular design for minimum drag in crop. Pads available in 1) 24 mini and 2) 24 & 33 groove. All types of pads available in either concave, flat and/or convex. Operates best at 6-10 PSI. Multiple irrigation & chemigation pads to select from.

NELSON 3000 SERIES PIVOT PRODUCTS

As with all NELSON 3000 Series Pivot Products, each sprinkler type incorporates a user-friendly, modular design with quick change plastic color-coded nozzles. Each body type has a square thread which can be used with a standard 3/4" MPT by square thread base or matched with a square thread regulator which eliminates the need and cost of the base.

NELSON R3000 ROTATOR® (15-50 PSI)

R3000 Rotators offer a slow rotating plate which produces the widest pattern of any below mainline sprinkler. This results in a lower application rate, reduced runoff and longer soak times. R3000 Rotators are available with a wide range of plates with a variety of trajectories & groovings. Up top plates include the U4-8 degree blue and the new U6 multi-trajectory white. Drop plates include the D4-8 degree green, D6-12 degree red, a new D8 multi-trajectory orange & a new D10 multi-trajectory brown plate. Also available with TRASHBUSTER body (TR3000) to reduce the accumulation of debris on the body in dirty water applications. TR3000 rotators available with 3000FCN flow control nozzles for reduced chance of plugging.

NELSON S3000 SPINNER (10-20 PSI)

S3000 Spinners utilize the higher speed spinning action of the rotor plate to produce a gentle rain-like droplet for sensitive soils and crops. A low pressure alternative to fixed sprayheads, the S3000 provides higher uniformity with better overlap and lower application rates. Available plates include the D6-12 degree red, D6-20 degree purple and new D8 multi-trajectory yellow.

NELSON D3000 SPRAYHEAD (6-40 PSI)

The flip over dual spray cap on the D3000 allows for easy conversion of the spray pattern.Choose from spray plate options to germinate, irrigate & chemigate. Plate selection includes 1)smooth flat, 2)30 stream fine groove in either concave, flat or convex, 3)36 stream medium deep groove in either concave or flat, 4)24 stream coarse deep groove flat, 5)21 stream coarse deep groove & 33 stream medium deep groove multi-trajectory & 6)corn & cotton chemigation. For Low Energy Precision Application (LEPA), utilize HDA hose drag adapters to attach 3/4" drag hose or drag socks. You may also snap on a bubbler clip to create a LEPA bubbler. Circular design allows for easy passage through the thickest foliage.

NELSON PART CIRCLE 3000 SERIES PIVOT PRODUCTS

The PART CIRCLE 3000 SERIES was developed for use on either side of pivot towers to reduce the amount of water applied to the wheel track area. The part circle directional control is produced by a stream deflector between the nozzle & the body. The stream deflector, plates & motors are unique to the PC R3000 Part Circle & PC S3000 Part Circle & may not be used with standard R3000 Rotators & S3000 Spinners. The PC D3000 Part Circle sprayhead is used mainly with low pressure spray systems. PART CIRCLE 3000 SERIES Sprinklers are also being used as endguns with great success. With up to 35 feet of throw & no stalling due to low pressure they are a problem free answer to adding productive acres to your field.

NELSON PC-R3000 PART CIRCLE ROTATOR® (15-30 PSI)

The PC R3000 Part Circle Rotator comes with two different plates. Use the white plate for nozzle sizes #14 - #35 & the black plate for nozzle sizes #36 - #50. Coarse grooved plates create healthy droplets that fight wind & increase distance of throw. The part circle mechanism comes as an assembly which includes the stream deflector, body, plate, cap & motor. 190° Arc with up to 35 feet of throw.

Part No.	Description	Price
PC-R3000	Complete Assembly w/3TN & 3/4" MNPT	$32.83
9410	3000 Adapter 3/4" MNPT	$1.21

10843-###	PC R3000 Less Nozzle & Less Adapter	$30.16

NELSON PC-S3000 PART CIRCLE SPINNER (10-20 PSI)

The PC S3000 Part Circle Spinner uses one plate to cover the entire nozzle range of #14 - #40. Being in the Spinner family it produces a gentle, rain-like droplet. The part circle mechanism comes as an assembly which includes the stream deflector, body, plate, cap & motor. 190° Arc with up to 26 feet of throw.

Part No.	Description	Price
PC-S3000	Complete Assembly w/3TN & 3/4" MNPT	$25.59

NELSON PC-D3000 PART CIRCLE SPRAYHEAD (10-20 PSI)

The PC D3000 Part Circle Sprayhead uses one plate to cover the entire nozzle range of #9 - #50. This 170° medium groove concave plate produces small streamlets that travel up to 19'. The body and plate come as an assembly.

Part No.	Description	Price
PC-D3000	Complete Assembly w/3TN & 3/4" MNPT	$10.56

NELSON 3000 SERIES PIVOT PRODUCTS

NELSON A3000 ACCELERATOR (10-15 PSI)

Designed as a hybrid of Rotator® & Spinner technology, the Accelerator increases rotation speed as nozzle size increases. Smaller nozzles rotate slowly giving maximum distance of throw & reduced misting. As the nozzle size increases the plate speeds up keeping a uniform size droplet over a large range of nozzles. Created with corn in mind, the droplet size is healthy & the rotating streams penetrate through the foliage much better than conventional sprays. As a rotating type sprinkler the A3000 produces a wider pattern, compared to sprays, resulting in a lower application rate, reduced runoff, higher uniformity & longer soak times.

Part No.	Description	Price
A3000	Complete Assembly w/3TN & 3/4" MNPT	$16.91
9410	3000 Adapter 3/4" MNPT	$1.21

NELSON T3000 TRASHBUSTER SPRAYHEAD

Land application of wastewater through center pivots is proving itself to be an excellent solution. Proper waste management through a center pivot can be both cost effective & environmentally safe. Land applications of wastewater include livestock waste, municipalities, industrial processing & food processing. The T3000 TRASHBUSTERS open body design allows debris to pass off the plate with reduced opportunity of clinging to the struts. Commonly used with medium 30 groove plates to reduce the chance of debris sticking to a deeper grooved plate. The T3000 is also used with 3000FCN Flow Control Nozzles to reduce plugging.

Part No.	Description	Price
TD3000	Complete Assembly w/3TN & 3/4" MNPT	$14.66

NELSON O3000 ORBITOR® (10-15 PSI)

Featuring technology that eliminates the struts of a sprinkler body, Nelson's new Pivot Orbitor provides outstanding uniformity and optimal droplets at low pressures (10-20 psi). Expect long wear life and durability in poor water conditions, because there are no sprinkler body struts for debris to hang up on.

Part No.	Description	Price

NELSON 3000 SERIES PIVOT PRODUCTS & ACCESSORIES

3TN DUAL NOZZLE CLIP

Holds two separate 3TN nozzles for dual-flow sprinkler packages. Change flow rates quickly & accurately to meet differing application requirements & seasonal demands. No reading the printout on a wet or windy day & no searching through the bucket to find the right nozzle. Just twist off the body & flip the clip over. Clips are clearly marked with a HI on the square side and LO on the rounded side.

Part No.	Description	Price
9742	Dual Nozzle Clip Only	$1.33

3TN TRIPLE NOZZLE CLIP

Holds three separate 3TN nozzles for tri-flow sprinkler packages. Change flow rates quickly & accurately for those wells that just won't stay constant. Same easy change method as the dual nozzle clip. Three nozzle chambers clearly marked with a 1 LOW pointed side, a 2 MED round side & a 3 HIGH square side. Do not use with D3000 red plate.

Part No.	Description	Price
11089	Triple Nozzle Clip Only	$2.09

SQUARE THREAD X HOSE BARB ADAPTER

For use when installing from 3/4" drop hose directly into a Nelson 3000 Series sprinkler. Eliminates additional fittings & saves time & labor.

Part No.	Description	Price
9901	Square Thread x Hose Barb Adapter	$1.28

NELSON 3000 SERIES BLUE TOP REGULATORS

Nelson introduces the new single strut regulator design. Instead of having 3 or 4 struts holding the regulator seat in place, all new Blue Top regulators will have one heavy duty strut only. This opens up the seat area to help reduce plugging on the upstream side of the regulator. Along with the standard 3/4" FIPT by 3/4" FIPT model, Nelson makes the 3/4" FIPT by square thread (ST) model. This eliminates the need & cost of a threaded adapter, as the regulator screws directly into the body of any 3000 Series sprinkler.

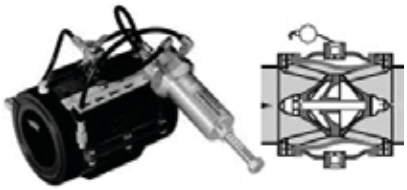
NELSON 800 SERIES CONTROL VALVES



Nelson 800 Series Valves are available in a variety of configurations for all types of irrigation systems. They have a barrel style design that minimizes friction losses and allows high flow rates. Valve body sizes 2", 3", and 4" are constructed of anodized aluminum while 6" and 8" bodies are galvanized steel, all with epoxy coated cast iron cages inside. Example valves are listed directly below. Custom design your valve by adding together the various options. Pressure reducing and sustaining pilots, rate of flow, solenoids, and filters (sections D, E, and H) are also available as separate add-on kits. Each valve is custom built to order and tested before shipment.

PIVOT END GUN BOOSTER PUMP & ACCESSORIES

This quality booster pump is built to meet the heavy-duty demands of its application. It is available as a 2HP model. No need to disturb pipe for normal maintenance. It has the same housing design as Berkley and will interchange with Berkley. Simply unbolt the old Berkley unit and replace it with the X-CAD model.

TELESCOPING DRIVELINE WITH COUPLER ENDS

This is the ultimate time saving device. Typical installation requires 5-10 minutes. The telescoping feature makes lengths easily adjustable without having to cut driveshafts in the field. Heavy-duty materials and construction provides more durability than standard driveshafts. Made of square steel tube with 1" round ends for connection to gear boxes.

Part No.	Description	Price
PDLEXP	Telescoping Driveline w/Coupler Ends	$72.60

UNIVERSAL STEEL DRIVELINE COUPLER

• One size fits all 3/4", 7/8" and 1" driveshafts • Flex in the disc eliminates shock on start up • No slack anyplace - takes jump out of gearboxes • Slotted 1" round end allows for tightening on worn shafts and prevents the U-Joint from freezing on the shaft • The disc is the only part that wears and it can be easily replaced • Clamps on to twisted driveshafts • Made with a milled angle for a tighter fit • Only 3 bolts and 5 nuts to tighten (stainless steel) • One 9/16" wrench fits everything • Longer lasting than aluminum couplers.

Part No.	Description	Price
U-JOINT-4.5	Universal Steel Driveline Coupler w/Large Disc	$38.57
U-JOINT-3.5	Universal Steel Driveline Coupler w/Small Disc (Bell-Insert)	$38.57

U-JOINT-DISC-SM	Small Disc for Bell Insert	$7.42
U-JOINT-BOLTKIT	Angle Bolt, Nuts, and Washers	$5.14

DOUBLE ANGLE U-JOINT

This U-Joint is made for the 11.2 x 38 tires where there is a large amount of torque involved. They can also be used in place of the bell-insert U-Joint on any size of tire. They cannot be used when the driveline and gearbox are not in-line.

UMC FINAL DRIVE WHEEL GEARBOX

725 SERIES - OUR MOST POPULAR MODEL
- 50:1 (725U) gear ratio
- 2-1/4" output shaft
- extended length hub design allows greater bearing spacing to accommodate higher load requirements
- peak torque in excess of 69,000 in.-lbs.
- dual input seals
- high strength cast iron bolt-on end caps
- universal multimount bolt pattern

725TNT TOWABLE SERIES
- 50:1 (725UTNT) gear ratio
- 2-1/4" output shaft
- positive lock in both tow and non-tow positions
- easy to disengage for towing
- universal mount fits most systems
- lighter than standard towable units
- available with hydraulic adapter

740 SERIES
- 50:1 (740U), 52:1 (740UV), 52:1TNT (740UV-TNT) gear ratios available
- 2-1/4" output shaft
- heavy-duty worm input bearings
- extra heavy-duty wheel gearbox for heavier towers
- tested loads in excess of 125,000 in.-lbs.
- special crop guard seals on all shafts
- universal multimount bolt pattern

745 SERIES
- 50:1 (745U) gear ratio
- 2-1/2" output shaft
- high strength steel output shaft and forged worm
- input shaft guard included
- universal multimount bolt pattern
- available with towable hub

760 SERIES
- 50:1 (760U) gear ratio
- precision ground 2-1/2" output shaft
- dual output & input seal with external grease lube capabilities
- static load tested in excess of 145,000 in.-lbs.
- bolt pattern fits all pivots & lateral/linear systems
- includes A-110 bolt pattern
- full cycle expansion chamber
- optional bronze gear

600 SERIES SMARTSWITCH™ DIGITAL RADIO SWITCH FOR MONITOR AND CONTROL

The SmartSwitch™ was originally designed for the harsh environment of the agricultural irrigation industry, to control electric or engine driven pumps when the center pivot or lateral move system shuts down. Its intended use was and continues to be to eliminate the need for fault-prone underground control wire. No FCC license is required to operate this system. Installation and operation is simple and reliable.

NO SPIN LUG

Tower stuck? This successfully tested and field proven product, widely acclaimed by dealer and grower alike, is your solution to the problem. Uniquely designed and manufactured of steel to meet the rigorous demands of its heavy-duty application, yet lightweight - approximately 19 lbs. - making it easy to transport into the field where it can simply and easily be installed in seconds on either lead or trailing tire. Best results are obtained when two units are installed per tower - one on each tire - at 180 degree positioning, allowing for increased digging traction. Stays clean even in clay soils. Little or no maintenance required.

MCCROMETER FLOW METER

McCrometer flow meters are an economical choice for dependable flow measurement. The measuring device of this flow meter is a propeller, which when positioned in the center of the flowstream, will rotate at a velocity proportional to the velocity of the fluid moving through the flow meter. This rotation is transmitted mechanically to a register, and the fluid's volumetric flow rate and accumulated volume is then displayed via an instantaneous flow indicator and totalizer. The register case is hermetically sealed with a hinged lens cover and locking hasp. All McCrometer products are thoroughly tested and inspected during manufacture and prior to shipping. These meters require a minimum 5 diameters of straight pipe upstream and a minimum of 1 diameter of straight pipe downstream of the flow meter. Also required is a full pipeline of water for an accurate measurement. Although most installations are horizontally oriented, McCrometer flow meters can be specially ordered for vertical installation if needed. When properly ordered and installed, accuracy is guaranteed to be within + or - 2% of the actual flow.

• The model MO300 bolt-on saddle flow meter is our most popular and economical flow meter. It features a stainless steel saddle which eliminates the fatigue-related breakage common to cast iron and aluminum saddles and provides unsurpassed corrosion protection.

• The model ML100 irrigation flow meter is designed to provide accurate flow measurements at moderate pressure ratings in an inexpensive package. This low cost flanged tube meter is also a very popular selection, where a flanged connection is preferred.

• The model MF100 flanged meter features heavier steel construction which may be more desirable at higher operating pressures.

NOTE: Grayline actuator part numbers and price are for 110 volt single phase.
Grayline actuators based on 50PSI working pressure. Please advise if actual operating pressure exceeds 50PSI.
Grinnell actuators are universal voltage covering a range from 24 to 240 volts AC or DC, 1 phase 50/100 HZ.

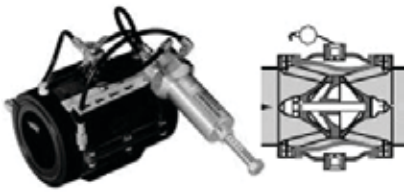
NELSON 800 SERIES CONTROL VALVES



Nelson 800 Series Valves are available in a variety of configurations for all types of irrigation systems. They have a barrel style design that minimizes friction losses and allows high flow rates. Valve body sizes 2", 3", and 4" are constructed of anodized aluminum while 6" and 8" bodies are galvanized steel, all with epoxy coated cast iron cages inside. Example valves are listed directly below. Custom design your valve by adding together the various options. Pressure reducing and sustaining pilots, rate of flow, solenoids, and filters (sections D, E, and H) are also available as separate add-on kits. Each valve is custom built to order and tested before shipment.

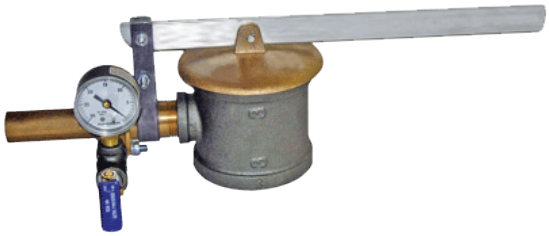
Note: Exhaust Primers are not recommended for use on turbo engines.



The Exhaust Primer is an air ejector adapted to an engine-driven pump. An adapter is attached to the exhaust stack to which the ejector is attached, and a lever-operated "exhaust valve" is provided by which the engine exhaust gases are momentarily diverted through the ejector during the priming period. "Momentarily" means 10 seconds to 2 minutes depending on the suction lift and length and size of the suction line. It operates on low engine exhaust pressure. When the exhaust valve is closed, the gases are directed through the ejector nozzle and air is drawn from the pump through the ejector suction.
All standard Protek Exhaust Primers are designed to operate at 12 to 14 PSI and thereby provide maximum lift and rapid priming.

SELF CLEANING PUMP SUCTION SCREEN

The pump suction screen is attached to the end of the pump suction line by way of a standard flange. All water pulled in must go through the screen before entering the intake pipe. The 10, 18 or 30 mesh heavy stainless steel screen stops trash and debris from entering & creating problems associated with plugging. A small sidestream pump discharge return line drives two spray bars that continually rotate jet streams at the screen & blasts debris away from the screen. The unit is manufactured with heavy galvanized steel construction & a removable exterior basket for servicing.

AG - NELSON FEEDTUBE ASSEMBLIES

One of the most common ways to install D10, S10, R10 Series or R2000 Series Product is on a PVC riser extending from a permanent, often buried, lateral pipeline. However, because this is not always desirable considering cost, convenience, portability requirements and a host of other related issues, Nelson has developed several feedtube options. These versatile stake mounting options feature durable UV and kink resistant flexible PVC tubing. They provide for fast and simple installation, easy nozzle cleaning (kink the tubing to stop the flow), and low cost with a high value. The FT1 and FT2 feedtube assemblies are for use with the R10 due to the small .19" ID feedtube used in the assembly, which prohibits higher flow products. The FT4 and FT5 feedtube assemblies utilize a larger .37" ID flexible PVC feedtube and should be used for products requiring nozzle size #65 or larger. FT4 and FT5 feedtube assemblies connect R10 Series, R2000 Series, S10 and D10 products to polyethylene laterals. FT4 is for permanent connection and FT5 has a quick connect and disconnect feature for portable lateral systems. Both assemblies are mounted with steel stakes. With the addition of collar #9195 to FT4 and FT5, they can be converted to mount on a 3/4" PVC stake. Please call us if you have any questions which relate to these fine products.

KURIYAMA TIGERFLEX BW "BLUE WATER" SUCTION & DISCHARGE HOSE

This is a multi-purpose low temperature suction & transfer hose for use in irrigation, agriculture, construction, mining & for abrasive liquid applications. It has a clear body with a blue helix & is constructed from HMW clear PVC resin to allow for visual confirmation that material is flowing. The HMW PVC body provides sub-zero flexibility & increased abrasion resistance compared to standard PVC. It is made with a smooth cover on sizes 3/4" - 4" making clamping easy, & a convoluted cover on 5" & 6" for greater flexibility. The service temperature range is -40°F to 150°F. All sizes are available in 100' coils. In addition, 5" & 6" is available in 20' lengths. Available for purchase by the foot or by the coil.

Good for medium & heavy-duty applications. Provides high tensile strength - higher clamping force than worm gear clamps. Manufactured with durable & corrosion resistant 300 series stainless steel. The solid band with rounded edges prevents damage from hose extrusion.

94100 Series clamp has a 3/4" wide band & 1/4" zinc plated T-Bolt with locknut.

95130 Series clamp has a 7/8" wide band & 5/16" zinc plated T-bolt with locknut.

These Spin Clean® filters are unique in that incoming water is forced through a directional nozzle plate onto the inside of the all stainless steel filter screen. This centrifugal control of the contaminated water helps prevent debris build up on the filter screen by constantly rotating the particles and forcing them toward the debris holding basin at the bottom of the filter. By opening the flush valve periodically, the particles can be removed, or the 4E can be made self cleaning by constantly bleeding the contaminates through the flush valve which has been set slightly open.

NELSON R5 ROTATOR® PRODUCTS

The R5 Rotator® is a completely different micro sprinkler, with a unique and patented drive principle. The water stream emitting from the nozzle is directed into an offset channel on the rotor plate, creating a reactionary drive force. A viscous silicone fluid in the rotor motor controls the rotation speed. Rotator® technology gives the R5 high uniformity and a distance of throw greater than that of any other micro sprinkler.

The R5 Rotator® is available with either a standard or flow control nozzle. The flow control nozzle option for the R5 Rotator® features a flow control nozzle that regulates flow starting as low as 15 PSI. Commonly used micro sprinklers with pressure compensation are not recommended for use under 20 PSI. Flow Control Nozzles deliver more accurate flow regulation at lower pressures. Further, they assure uniform application of water throughout the crop.

Always use the recommended pressure for a given plate and nozzle combination. The absence of flow data on the chart below for a particular plate / nozzle combination indicates the pressure is outside the recommended range. Filtration is suggested to be 75 mesh or finer. The plate and nozzle of the R5 should not be removed when cleaning plugged nozzles. Any attempt to do so will likely cause permanent damage. Please give us a call if you have any questions pertaining to the R5.

TO CALCULATE	EQUATION	EXAMPLE
AREA IRRIGATED BY A CENTER PIVOT	$AC = \frac{(PL + EGR)^2}{13866}$ AC = ACRES IRRIGATED PL = PIVOT LENGTH (FT.) EGR = END GUN RADIUS (FT.)	FIND THE ACREAGE IRRIGATED BY A 1000' PIVOT WITH AN END GUN WITH A 130' RADIUS $AC = \frac{(1000 + 130)^2}{13866}$ AC = **92 ACRES**
HOURS PER PIVOT REVOLUTION	$HPR = \frac{0.105\ (LTD)}{GS}$ HPR = HOURS PER REVOLUTION (HR.) LTD = DISTANCE TO LAST TOWER (FT.) GS = TOWER GROUND SPEED (FT./MIN)	FIND THE AMOUNT OF TIME NEEDED FOR THE PIVOT ABOVE TO COMPLETE A REVOLUTION IF THE LAST TOWER MOVES AT 10.2 FT. PER. MINUTE. THE 1000 FOOT LENGTH INCLUDES A 40 FOOT END BOOM. LTD = 1000 FT. - 40 FT. = 960 FT. $HPR = \frac{0.105(960)}{10.2}$ HPR = **9.9 HOURS PER REVOLUTION**
AMOUNT OF WATER APPLIED BY A CENTER PIVOT	$D = \frac{(30.64\ Q\ HPR)}{(PL + EGR)^2}$ D = DEPTH OF WATER APPLIED (IN.) Q = FLOWRATE (GPM) HPR = HOURS PER REVOLUTION (HR.) PL = PIVOT LENGTH (FT.) EGR = END GUN RADIUS (FT.)	DETERMINE THE AMOUNT OF WATER APPLIED FOR THE 1000 FOOT PIVOT CONSIDERED ABOVE AT 700 GPM. $D = \frac{30.64\ (700)\ (9.9)}{(1000 + 130)^2}$ $D = \frac{212{,}365}{1{,}276{,}900}$ D = **0.17 INCH**
REQUIRED FLOW FOR A GIVEN PIVOT SPRINKLER	$Qs = \frac{DFP\ (Q/AC)\ SS}{6933}$ Qs = SPRINKLER FLOWRATE (GPM) DFP = DISTANCE FROM THE PIVOT (FT.) Q = TOTAL PIVOT FLOWRATE (GPM) AC = ACRES IRRIGATED BY PIVOT SS = SPRINKLER SPACING (FT.)	DETERMINE THE FLOWRATE REQUIRED BY A SPRINKLER LOCATED 750 FEET FROM THE PIVOT, IF THE SPRINKLER SPACING AT THAT POINT IS 17 FEET. $Qs = \frac{(750)\ (700/92)\ (17)}{6933}$ $Qs = \frac{97{,}011}{6933}$ Qs = **14.0 GPM**
CALCULATING NOZZLE FLOWRATE WITH CHANGING PRESSURE	$Q_1/Q_2 = (P_1)^{1/2}/(P_2)^{1/2}$ $Q_2 = Q_1\ (P_2/P_1)^{1/2}$ Q_1 = KNOWN NOZZLE FLOW (GPM) Q_2 = NOZZLE FLOW TO DETERMINE (GPM) P_1 = PRESSURE (PSI) FOR Q_1 P_2 = PRESSURE (PSI) FOR Q_2	DETERMINE THE FLOWRATE OF A #30 3TN NOZZLE AT 15 PSI, KNOWING THE FLOW @ 10 PSI IS 4.94 GPM $Q2 = 4.94\ (15/10)^{1/2}$ Q2 = **6.05 GPM**
