

DIRECT BURIAL & SUBMERSIBLE SPLICE CONNECTORS

Are you looking to save time? Simplify your work on the job?
 The new Melni Direct Burial & Submersible Splice Connector is your answer to both.

In larger sizes a crimp-style connector can take up to 15 minutes to fully install. But the Melni Connector can be installed in less than 1 minute! Just insert the stripped cable, twist the end caps to tighten the patented spiral insert, and then tighten the waterproof caps. That's it!

WIRE & CABLE CONNECTORS

| Part No. | Model No. | Description |
|--------------|-----------|-------------|
| MCSCC5S-IK02 | MC-2400 | #2-#4 |
| MCSCC5S-MN02 | MC-1200 | #1/0 - #2/0 |
| MCSCC5S-OP10 | MC-3400 | #3/0 - #4/0 |

FEATURES

Ease of Installation: The Melni connector is easy to use. Just insert the stripped cable, twist the end caps to tighten the patented spiral insert, and then tighten the waterproofing caps.

Installation Time: In the larger sizes a crimp-style connector can take up to 15 minutes to fully install. The Melni connector can be installed in less than a minute.

Waterproof Connection: The Melni connector is waterproof with sealing caps that compress a high-temp silicone bushing around the cable.

The wire is saved when replacing a connector: Simply cut the connector in half using a cable cutting tool and the two ends of the connector will slip off leaving the wire untouched.

Toolbox Simplification: It's no longer necessary to keep a list of things needed to make a proper connection like the hydraulic crimper, proper dies, tapes and shrink wraps.
